

## AK4 Human

**Description:**AK4 Human Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 243 amino acids(1-223a.a.) and having a molecular mass of 27.4kDa. AK4 protein is fused to a 20 amino acid His tag at N-terminus and is purified by standard chromatography.

**Introduction:**

AK4 belongs to the adenylate kinase family of enzymes. AK4 protein is restricted to the mitochondrial matrix. Adenylate kinases regulate the adenine and guanine nucleotide structures in a cell by catalyzing the reversible transfer of phosphate group among these nucleotides. Hereditary mutations which cause AK4 deficiencies in erythrocytes have been associated to hemolytic anemia.
